

Deployed On-Page SEO Project

1. Website Audit

- Analyze current website performance
 - Identify SEO issues (missing tags, slow speed, broken links)
-

2. Keyword Implementation

- Add targeted keywords to:
 - Page titles
 - Meta descriptions
 - Headings (H1, H2)
 - Content naturally
-

3. Optimize On-Page Elements

- Update title tags & meta descriptions
 - Improve URL structure (short & keyword-rich)
 - Add image alt text
 - Use proper heading structure
-

4. Content Optimization

- Improve content quality and readability
 - Add relevant keywords without stuffing
 - Ensure user-friendly and informative content
-

5. Technical Fixes

- Fix broken links
- Remove duplicate content
- Improve page speed
- Make site mobile-friendly

6. Internal Linking

- Link relevant pages within the website
- Improve navigation and user experience

7. Upload Changes (Deployment)

- Implement all updates in CMS (like WordPress) or website backend
- Publish/Update pages to make changes live

8. Submit to Search Engines

- Submit sitemap via Google Search Console
- Request indexing for updated pages

After Deployment (Important)

- Track performance using Google Analytics
- Monitor keyword rankings
- Check traffic and bounce rate
- Continuously optimize
